Project Title: St. Louis Blues Website

For my website, I want to create multiple pages rather than a single screen. This will allow me to better organize my information and make it more digestible. I will have a navigation bar at the top of the page, which will make it very intuitive. Rather than focusing on rosters and schedules like the official Blues page, I will focus on its history and culture.

- **Home Page / Introduction** – Introduce the St. Louis Blues, including the team's identity, location, and role in the NHL. Feature team imagery and an overview of its history and significance to the city.
- **Team History** – Cover the team's founding in 1967, its early years in the NHL, major milestones, and its development over time. Include a timeline?
- **Championships and Achievements** – Highlight the team's major accomplishments, especially its 2019 Stanley Cup victory, along with notable playoff runs, awards, and records.
- **Players and Legends** – Feature notable past and present players, their contributions to the team, and their impact on Blues history.
- **Team Culture and Legacy** – Explore the Blues' connection to St. Louis, the team's fan culture, traditions, and lasting impact on the city and its hockey community.
- **Sources and Credits** – List the Wikipedia page and any additional sources used for historical information, statistics, and photography, along with relevant image credits and other acknowledgments.
